Restriction to one of the following inventions is required under 35 U.S.C. §121:

- I. Claims 13-23, drawn to a “cell growth promoter” that contains one or more peptides, and perhaps other compounds as well.
- II. Claims 24-30, drawn to a peptide.

The claimed inventions are distinct.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations. (M.P.E.P. § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed; the peptide has utility in and of itself. However, in the event that Group II is elected, and the claimed peptides found to be novel, novelty would, in all likelihood, extend to a claim that is drawn to a composition that contains one of the novel peptides. (One possible exception would be if novelty of Group II required the presence of the term “isolated”).

. . . .

In addition to the foregoing, applicants are required under 35 U.S.C. §121 to elect disclosed species/subgenera (as follows) for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable:

In the event that Group I is chosen for initial examination, election is required of each of the following:

- a ) a specific and fully defined oligopeptide that is present in the “cell growth promoter” (note that if the term “having” or “containing” or “comprising” is used to describe the peptide, then applicants will be describing a genus, not a specie);
- b ) one of the following: (i) the “cell growth promoter” is a single, pure compound, or (ii) the “cell growth promoter” is two or more compounds (for example, one such compound might be a compound that is listed in paragraph 0032 of US 2007/0213276);
- c ) in the event that the “cell growth promoter” is a mixture that consists of two or more compounds, election is required of a specific and fully defined mixture.

. . . .

In the event that Group II is chosen for initial examination, election is required of a specific and fully defined peptide.

. . . .

Applicant is advised that a response to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a generic claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP 809.02(a).

Should applicant traverse on the ground that the species are not patentable distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. §103 of the other invention.
